SUMMARY

IT professional with 7+ years of experience supporting enterprise hardware, servers, virtualization environments, end users, and point-of-sale systems. Experienced in diagnosing hardware, operating system, networking, firmware, and configuration issues across enterprise environments. Background includes Technical Support Engineering at Dell Technologies, enterprise IT support, and nationwide onsite POS infrastructure deployment. Strong foundation in Windows, server hardware, VMware/ESXi, Hyper-V, networking, and troubleshooting, complemented by a Computer Science background and hands-on PowerShell automation projects.

EDUCATION

Rhode Island College

Bachelor of Arts — Computer Science

2019

Community College of Rhode Island

Associate of Science — Computer Programming

2016

EXPERIENCE

Onsite Installation Technician

June 2025 – Present

Rocky Mountain POS

Self-Employed

- Travel throughout the United States performing onsite POS hardware/software installations, upgrades, replacements, and troubleshooting.
- Install and configure POS systems for major retail environments, including Walmart front-end systems, Kroger registers, and Toshiba terminals.
- Install UPS systems and diagnose hardware, connectivity, peripheral, software, and configuration issues in time-sensitive environments.
- Work independently at customer locations while coordinating with remote teams and project stakeholders to complete installations and resolve issues.
- Manage onsite responsibilities, travel, scheduling, and customer-facing technical work as an independent contractor.

Technical Support Engineer II

March 2020 – June 2025

Dell Technologies

Full-Time

- Provided advanced technical support for enterprise customers experiencing hardware, server, operating system, virtualization, and configuration issues.
- Diagnosed Dell PowerEdge rack, tower, and blade servers, including storage, RAID, memory, processors, power systems, network components, and system boards.
- Used iDRAC and Lifecycle Controller to diagnose hardware failures, review system logs, collect diagnostics, and perform management operations.
- Troubleshoot BIOS, firmware, driver, boot, partition, and operating system issues across Windows Server and virtualization environments.
- Supported VMware/ESXi and Hyper-V environments and assisted with server and virtualization-related issues.
- Used Dell SupportAssist, Dell Command Update, OMSA, PuTTY/SSH, system logs, and diagnostic tools to isolate and resolve technical problems.

- Performed structured troubleshooting and root-cause analysis while communicating technical information to enterprise customers.
- Supported enterprise, internal, and government customers while following customer-specific security and data-handling requirements.
- Mentored new technical support engineers and maintained detailed case documentation in Salesforce.

Tier 1.5 IT Support

July 2019 – March 2020

Apex Systems

Contract

- Provided Tier 1.5 technical support in an enterprise IT environment, troubleshooting Windows, applications, hardware, connectivity, and account-related issues.
- Diagnosed technical problems through structured troubleshooting and remote support tools.
- Escalated complex issues while maintaining detailed ticket documentation and providing customer-focused technical support.

PROJECTS

Wireshark Network Analysis | Wireshark | TCP/IP | Windows

- Built hands-on packet-analysis investigations covering DHCP, DNS, ARP, ICMP, NAT, TCP, and traceroute.
- Analyzed packet-level communication to understand network configuration, address resolution, connectivity, and TCP behavior.
- Documented findings and troubleshooting observations in a technical portfolio.

Enterprise AD GPO Auditor | PowerShell | Active Directory | Group Policy

- Developed a PowerShell auditing tool to examine Active Directory Group Policy configuration and identify potentially problematic or inconsistent settings.
- Applied PowerShell automation to practical enterprise administration and troubleshooting scenarios.

Windows Driver Audit Tool | PowerShell | Windows | Device Management

- Developed a PowerShell tool to audit installed Windows drivers and collect relevant driver information.
- Applied scripting and Windows administration concepts to automate system diagnostics and support troubleshooting.

TECHNICAL SKILLS

Infrastructure: Dell PowerEdge, Rack/Tower/Blade Servers, RAID, iDRAC, Lifecycle Controller, BIOS/UEFI, Firmware, VMware/ESXi, Hyper-V

Operating Systems: Windows 10/11, Windows Server, Linux

Networking: TCP/IP, DNS, DHCP, ARP, ICMP, NAT, IPv4, Traceroute, Network Troubleshooting, Wireshark

Automation: PowerShell, Windows Administration, Troubleshooting Automation

Tools: Dell SupportAssist, Dell Command Update, OMSA, PuTTY/SSH, Salesforce, GSEP, Zoom

Support: Enterprise Technical Support, Hardware Diagnostics, Root Cause Analysis, Incident Resolution, Remote Support

CERTIFICATIONS

CompTIA A+

CompTIA Network+
