SUMMARY

Enterprise IT professional with 7+ years of experience supporting enterprise infrastructure, virtualization platforms, server hardware, and end-user environments. Skilled in troubleshooting Dell PowerEdge servers, VMware ESXi/vCenter, Windows Server, Linux, enterprise hardware, firmware, and operating system issues. Experienced managing technical issues from initial diagnosis through resolution while collaborating with customers, vendors, and cross-functional technical teams. Holds a Bachelor of Arts in Computer Science and CompTIA A+ certification with a strong interest in automation and infrastructure technologies.

EDUCATION

Rhode Island College

Bachelor of Arts in Computer Science

2019

Community College of Rhode Island

Associate of Science in Computer Programming

2016

EXPERIENCE

Contract Field Technician (Contract Services for Rocky Mountain POS)

June 2025 – Present

JAC Club Installations LLC

- Perform nationwide deployment projects for Walmart and Kroger, completing enterprise POS hardware refreshes and software upgrade initiatives in production retail environments.
- Coordinate directly with Walmart, Kroger, and Toshiba personnel to execute hardware installations while minimizing business disruption.
- Install and upgrade POS terminals, M.2 SSDs, touchscreen displays, receipt printers, barcode scanners, scales, customer-facing displays, and UPS battery backup systems.
- Configure BIOS boot settings when required and assist Toshiba remote engineers with software deployment and network connectivity.
- Perform post-installation validation by testing checkout transactions, barcode scanners, cash drawers, receipt printers, scales, and other peripherals before returning systems to production.
- Troubleshoot installation-related hardware issues, including peripheral failures and cash drawer mechanisms, to ensure successful deployment.
- Complete deployment documentation through required photo verification while preparing retired equipment for return shipment.

Technical Support Engineer II

March 2020 – June 2025

Dell Technologies

- Provided enterprise technical support for Dell PowerEdge rack, tower, and blade servers supporting Windows Server, Linux, VMware ESXi, and virtualization environments.
- Managed support cases from initial customer contact through resolution by collecting diagnostics, analyzing logs, determining root cause, documenting findings, and coordinating corrective actions.
- Supported VMware ESXi and vCenter environments by reviewing cluster and host logs to isolate virtualization, hardware, and firmware-related issues.
- Diagnosed server hardware failures involving RAID, storage, processors, memory, power supplies, cooling systems, and system boards.
- Configured and troubleshooted Dell enterprise technologies including iDRAC, Lifecycle Controller, OpenManage Server Administrator (OMSA), BIOS/UEFI settings, firmware, and driver updates.
- Troubleshooted Windows Server, Windows 10/11, Linux, Secure Boot, TPM, BitLocker-related configuration issues, boot failures, partition issues, BSODs, and performance problems.

- Used Linux command-line tools and SSH to perform driver updates and operating system troubleshooting.
- Coordinated hardware replacement logistics and field service dispatches while guiding customers through self-service hardware replacements when onsite support was unavailable.
- Supported enterprise, government, and internal Dell customers while adapting troubleshooting procedures to meet customer security requirements.
- Mentored newly hired Technical Support Engineers through call shadowing, troubleshooting guidance, and enterprise support workflows.

Tier 1.5 Technical Support (Contract Supporting Boeing)

July 2019 – March 2020

Apex Systems

- Provided remote Tier 1.5 technical support to Boeing employees for Windows desktops, laptops, Microsoft Office, proprietary applications, and hardware peripherals.
- Troubleshoot GlobalProtect VPN connectivity issues and enterprise application access problems.
- Assisted users with internal account access, password resets, and security verification procedures.
- Managed escalated incidents from Tier 1 support by performing advanced troubleshooting and maintaining ownership through resolution.
- Monitored internal support channels to provide troubleshooting guidance and technical assistance to Tier 1 technicians.
- Documented technical issues, resolutions, and customer interactions using the GSEP ticketing platform.

TECHNICAL SKILLS

Infrastructure & Virtualization: VMware ESXi, VMware vCenter, Hyper-V, Dell PowerEdge Servers (Rack, Tower, Blade)

Operating Systems: Windows 10/11, Windows Server, Linux

Hardware & Firmware: RAID Configuration, BIOS/UEFI, Firmware Updates, Driver Troubleshooting, Secure Boot, TPM, BitLocker Troubleshooting, Server Hardware Diagnostics

Dell Technologies: iDRAC, Lifecycle Controller, OpenManage Server Administrator (OMSA), Dell SupportAssist, Dell Command Update

Support & Deployment: Enterprise Technical Support, Root Cause Analysis, Hardware Refreshes, Software Deployment, POS Deployments, Vendor Coordination, Remote Troubleshooting

Tools: Salesforce, GSEP, Remote Desktop, PuTTY (SSH), Zoom, Network Connectivity Diagnostics

CERTIFICATIONS

CompTIA A+
